Contract Development and Manufacturing

Production Fujifilm Tilburg

Fujifilm Tilburg was founded in 1982 and the first factory there started production in 1984. Nowadays, the industrial sized plants produce photographic color paper, offset plates and membranes. The methods and facilities to produce these products continue to improve, this in order to maintain operational excellence.

High awareness for safety, environment and quality are key competences for the well educated people working at Fujifilm. Therefore, Fujifilm has the position of market leader in imaging products. Because of digitization, capacity has become available on the industrial production lines to produce new and other products.

How does Fujifilm want to cooperate with other companies?

In all our factories around the world, Fujifilm has 12 core technologies in which it excels. These core technologies are continuously improved by the ongoing R&D activities which Fujifilm performs.

In Tilburg, several of these core technologies are embedded in the production facilities:

- High precision coating technology
- Nano dispersion technology
- Imaging technology

The production facilities and these core technologies are available for contract development and manufacturing activities.

What do we offer?

- Know-how on our core technologies and possibilities on test facilities
- Reliable partnership and high ethical standards
- No/low investments
- Short time to market
- Logistic services on site
- Our operational excellence is based on more than 35 years of production experience, continuous improvements (Kaizen, Lean Six Sigma) and well maintained processes (TPM - Total Productive Maintenance)
- Enthusiastic and competent team to translate the specifications of your products to our production lines. We can qualify and guide them through our production facilities for your customers

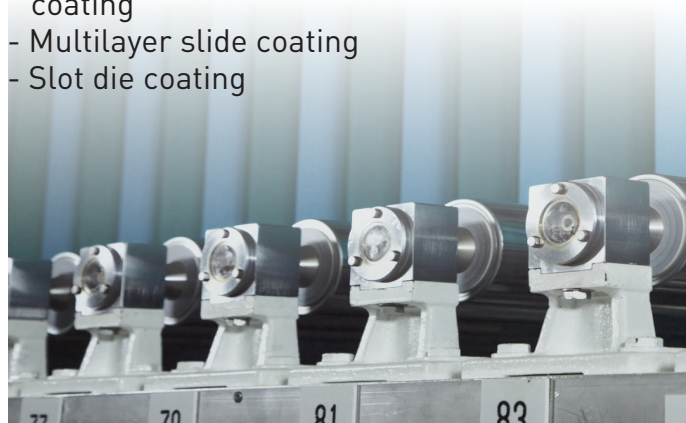

FUJIFILM &
Industrial Solutions

Tilburg, The Netherlands

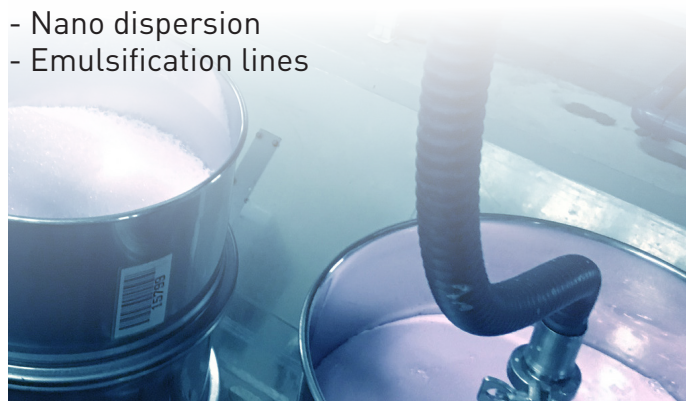

Coating

- Roll to Roll coating lines including solvent coating
- Multilayer slide coating
- Slot die coating

Emulsion

- Even size distribution
- Nano dispersion
- Emulsification lines

Finishing

- Slitting and packaging lines
- Embossing equipment

We would like to build a long-term relationship with you as our new partner to innovate together. We look forward to get in touch with you. From start-ups to multinationals, please contact us to discover what we can do for you.
